NAD+ IV

Overview

Nicotinamide adenine dinucleotide, also known as NAD+, is a coenzyme that is naturally produced in the body. When naturally occurring, it plays a role in energy production, metabolism, and DNA repair. As a result, NAD+ has been observed for its role in supporting healthy aging. In the event of an NAD+ deficiency, or in regimens designed around cellular health, NAD+ injections may be prescribed.

Product Information

Concentration: 100mg/mL

Volume: 10mL
